

Lab 3

=) 1] Creating a topology

2) Set the gateway and IP address in each end device

3) configure directly connected and devices to router using CLI console

→ Router > enable

→ Router # config terminal

→ Router (config) # interface fast ethernet 0/0

→ Router (config-if) # ip address 10.0.0.1 255.0.0.0

→ Router (config-if) # no shutdown

10.0

b) To connect devices which are not connected directly

Router → enable

Show ip verbr

Router # config t

255.0.0.0 Router (config) # ip route 30.0.0.0

255.0.0.0 20.0.0.2

Router (config) # ip route 40.0.0.0 255.0.0.0 20.0.0.2

→ exit

c) Once the route are configured check all the ping the IP address of one of the PC to the other

→ Ping 10.0.0.10

→ If the response to the ping is received,
